Incident reporting that supports smarter decision making

RailSmart IFM - The leading incident and fleet management solution for rail

Make smarter decisions and improve communications during disruption. Using RailSmart IFM, over 1 million incident messages have been sent to operational and front-line staff.

Record and capture

Record any type of incident, assign actions and capture updates.

RailSmart IFM **record and capture** allows you to:

- **Record and define multiple incident types.**
- **Tag people, assets and head codes to provide context and relevant information.**
- **Easily add supporting documentation so you can effectively resolve incidents.**

Communicate and notify

Improve incident response with effective communication during times of disruption.

RailSmart IFM **communicate and notify** allows you to:

- **Add live updates to incidents as events unfold in real-time.**
- **Accurately create distribution lists to send notifications to the right people as incidents happen.**
- **Provide the latest information during incidents to enable staff to do their job effectively.**

Collaborate and report

Ensure smarter decision-making during incidents with standardised reporting.

RailSmart IFM **collaborate and report** allows you to:

- **Quickly assign actions to collaborate on resolving issues as efficiently as possible.**
- **Monitor progress so you know exactly what stage you are at.**
- **Produce a daily incident report to provide a complete picture of operational performance.**
- **Analyse data to easily find trends and identify areas that require improvement.**
