

Make informed decisions by remotely monitoring train performance and asset status

RailSmart RCM – Enhances operational efficiency through automated data collection and remote condition monitoring

Boosting operator efficiency and maximising rail asset utilisation and train performance, RailSmart RCM offers a cutting-edge solution for remote rail monitoring.

Actionable insights

Enhance your fleet management choices by accessing up-to-date asset data and monitoring train activities in real-time.

RailSmart RCM **actionable insights** allows you to:

- Monitor any number of digital and analogue channels to improve train performance
- Safely integrate directly into the on-train data recorder (OTDR) meaning no on-site visits for OTDR data collection
- Access near real-time view of asset health to help make more informed decisions

Live and historical analysis

Categorise data based on headcode, driver, or a specific time series, allowing for better organisation and analysis of the information at hand.

RailSmart RCM **live and historical data analysis** allows you to:

- Instantly access time series asset information for deeper trending and analysis
- Export data channels or collections of data into popular file formats
- Group data by headcodes, journeys, drivers and time series for transparent train monitoring

Proactive rail maintenance

Gain the upper hand by proactively strategising instead of simply reacting, thanks to an enhanced perspective on the condition of assets.

RailSmart RCM **proactive rail maintenance** allows you to:

- Connect to RailSmart IFM solution for proactive fleet defect analysis to oversee train condition
- Configure to monitor and alert you to any variance in channel data
- Define triggers and receive instant notifications for proactive monitoring
